ANEES UR REHMAN

FULL STACK AI ENGINEER • ML SPECIALIST

Phone: +92 317 5230688 • **Email:** aneeskhann5577@gmail.com
Location: Mansehra, KPK, Pakistan • **Web:** anees.devsil.com
LinkedIn: linkedin.com/in/anees-khan-devsil
GitHub: github.com/aneeskhann5577-dotcom • **Kaggle:** aneeskhan1

PROFESSIONAL SUMMARY

Forward-thinking **Full Stack AI Engineer** specialized in transforming real-world complex data into robust, production-ready AI solutions. Experienced in Computer Vision, Generative AI (LLMs & RAG), Autonomous AI Agents, and Predictive Analytics. Demonstrated capability in building end-to-end machine learning pipelines from exploratory data preprocessing and model fine-tuning to scalable web integration and deployment.

WORK EXPERIENCE

Full Stack AI Engineer — *IMTA* **8 Months • Present**

- Architected end-to-end AI applications combining Python/PyTorch backends with modern frontend architectures.
- Designed, trained, and optimized predictive machine learning models, mitigating overfitting and improving generalizability.
- Developed autonomous AI Agent workflows and Generative AI systems for automating complex repetitive logical tasks.

TECHNICAL EXPERTISE

Core AI & ML:	Machine Learning, Computer Vision, Generative AI, Large Language Models (LLMs), AI Agents Dev, Predictive Analytics, MLOps, Data Mining
Frameworks & Libs:	Python, PyTorch, TensorFlow, OpenCV, Scikit-Learn, Pandas, NumPy, REST APIs, LangChain
Tools & Cloud:	Git & GitHub, Docker, AWS, SQL, Linux Environment, Jupyter Notebooks, VS Code
Professional Strengths:	Technical Consultancy, Problem Solving, Rapid Prototyping, Agile Collaboration, Cross-functional Communication

FEATURED PROJECTS

Currency Note Recognition Assistant
Computer vision deep learning model accurately classifying currency denominations to assist visually impaired individuals.
Tech: Python, OpenCV, Deep Learning, Image Processing

Parking Space Detection AI System
Real-time automated video stream monitoring pipeline detecting vacant and occupied parking spaces dynamically.
Tech: Computer Vision, OpenCV, Python

Customer Churn & Emergency Room Analytics
Predictive data science models analyzing patient telemetry and client churn risk with actionable classification insights.
Tech: Data Analytics, Scikit-Learn, Pandas, Jupyter

Autonomous AI Agents & GenAI Suite
Generative AI agents including Pakistan Law Helper, AI Resume/Cover Letter Maker, and AI Website Builder Agent.
Tech: LLMs, AI Agents, Python, Full Stack Integration

EDUCATION & CERTIFICATIONS

FSc (Higher Secondary)
Shaheen School & College Shinkiari • *2023 — 2025*

Matriculation
Army Public School & College Shinkiari • *2021 — 2023*

Python Ka Chilla (40-Days Intensive) — Codanics
Completed July 2024
Comprehensive training in Data Science, Machine Learning algorithms, feature engineering, and neural network pipelines.
